## LOG OF MEETING

**SUBJECT:** Integrated Timer/On-Off Control for Electric Range  
Surface Burners.

**DATE:** September 4, 1996      **PLACE:** Room 709  
East West Towers

**DATE OF LOG ENTRY:** September 12, 1996

**SOURCE OF LOG ENTRY:** William H. King, Jr., ESEE *W.H.K.*

**CPSC PARTICIPANTS:**

William H. King, Jr., ESEE  
Linda Smith, EHHA  
Carolyn Meiers, ESHF  
Robert Northedge, ESSE

**NON-CPSC PARTICIPANTS:**

Kent Clizbe, Elike  
Wayne Morris, Association of Home Appliance Manufacturers  
Maureen Cislo, Product Safety Letter

**SUMMARY:**

Mr. Clizbe requested the meeting to introduce the CPSC staff to a device which he has developed and has a patent pending. The device is an electro-mechanical control that integrates a timer into the rotary burner setting control for the surface burners of electric ranges. The device would provide a dedicated timer unit for each burner. The device would require the user to first set or rotate the timer for a specific amount of time. The burner could not be turned on until the timer is set due to the interlock between the burner setting control and the concentric timer knob. Once the timer has been set, the user could then select the desired burner heat setting. The device is intended for application in the design of new ranges and not as a retrofit for existing appliances.

Mr. Clizbe indicated that he will keep the CPSC staff apprised of the status of his patent.
